

AMD DEVELOPER HACKATHON: ACT II

DescribeX

Create Once. Caption Everywhere.

Team: Anushiv Prakash and Varsha Singh

</> **Open Source** Accessible AI infrastructure.

⚡ **Powered by Fireworks AI** High-performance inference.

DescribeX

AI-Powered Accessible Video Captioning

Create Once. Caption Everywhere.

Upload a short video and instantly generate four AI-powered caption styles with editable exports and burned-in captions.

Upload Video

Video URL

Video URL

Paste a publicly accessible MP4 URL.

<https://example.com/video.mp4>

Set URL

The Problem

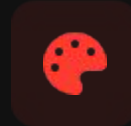

Slow Creation

Generating high-quality captions manually is incredibly time-consuming, bottlenecking the content pipeline.

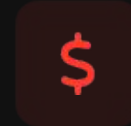

Ecosystem Lock-in

Existing tools often trap creators within closed ecosystems, making it difficult to export or port content.

Rigid Styles

Most AI captioners produce a single, robotic tone, failing to support multiple expressive writing styles.

Expensive

Basic accessibility features should not be locked behind expensive professional software tiers or paywalls.

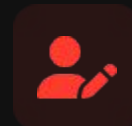

Introducing DescribeX

An open-source, AI-powered video captioning platform built for creators.

AI-Generated Styles

Instantly generate Formal, Sarcastic, and Humorous captions from a single upload.

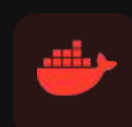

Human-in-the-Loop

AI assists; humans decide. All generated captions are fully editable before final export.

Creator-First Philosophy

Dockerized Engine

Modular Architecture

Local Upload

Remote URL

Video Validation

Frame Extraction

Smart Sampling

Vision Analysis

Scene Description

Caption Generation

Caption Formatting

JSON Output

Core Features

A premium user experience designed to minimize friction.

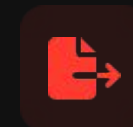

Responsive Modern UI

A clean, Apple-inspired interface with dark mode natively built in. Designed to look beautiful and function flawlessly on any screen.

Multi-Style Generation

Maximize content distribution. Generate four distinct caption variations simultaneously from a single video upload.

Seamless Exporting

Flexibility when you need it. Download generated caption files directly or copy formatted text straight to your clipboard.

Technology Stack

Frontend

Next.js
React 19
TypeScript
Tailwind CSS

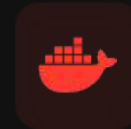

Backend

Python
FastAPI
Uvicorn
Pydantic
Validation

AI Provider

Fireworks
Vision: kimi-k2p6
Text: gpt-oss-120b
Multimodal
Inference

Deployment

Docker
Containerized
Vercel
Engine
Local Execution
(Frontend)

Hackathon Compliance

-  Reads /input/tasks.json
-  Supports video_url
-  Generates all four required styles
-  Writes /output/results.json
-  Valid JSON output
-  Docker image under 10 GB

Deployment **Status**

Verified Successes

Frontend Deployed: Next.js app live on Vercel.

Backend Builds: API starts and connects to Fireworks AI.

Local Execution: Full end-to-end processing works flawlessly on local machines.

Docker Ready: Container runs and processes tasks correctly.

Hosting Constraints

Cloud Resources Pending: Intended for AMD Developer Cloud, but resource approval was pending at deadline.

Temporary Render Limit: Fallback deployment on Render Free Tier is hard-capped at 512MB RAM.

OOM Reality: Video frame extraction predictably exceeds 512MB, causing Out-Of-Memory errors on the live demo server.

Future Roadmap

Advanced Export

Support for direct SRT/VTT downloads and server-side hardcoded video burns.

AMD Acceleration

Transition to AMD Developer Cloud for hardware-accelerated video frame processing.

Authentication & Storage

Implement user accounts and cloud storage to preserve caption history.

Multi-Language

Expand prompt engineering to automatically translate and caption in global languages.

Thank You.

Create Once. Caption Everywhere.
